Summary

Mobile and full-stack engineer (Flutter, Dart, TypeScript, PostgreSQL) with an MSc in Computer Science and Engineering from Instituto Superior Técnico (15/20; thesis 16/20). Solo-built and launched GYM RPG, a fitness app with 1,447 monthly active users on iOS and Android. Seeking a remote role on a team with code review and senior mentorship.

Experience

Founder & Lead Engineer, GYM RPG Feb 2026 – present
iOS and Android app: Flutter, Supabase, TypeScript *Remote, Portugal*

- Grew a solo-built Flutter app from 56 to 1,447 monthly active users in six months, with a 5.0 rating on Google Play and users in 9 languages across the US, Portugal, Brazil, Germany and more.
- Stopped client-side cheating in the in-app economy by moving rewards, purchases and boss fights into 60+ Deno/TypeScript edge functions, protected by PostgreSQL row-level security and 360+ versioned migrations.
- Monetized with RevenueCat subscriptions synced to the backend by webhooks: 33 subscribers in 90 days, about 4% of users who saw the paywall.
- Built social features (friends, parties, chat, co-op boss fights) and Firebase Cloud Messaging push notifications, including streak reminders and re-engagement jobs.
- Shipped 145+ builds to the App Store and Google Play with Fastlane and GitHub Actions, backed by 130+ test files (unit, widget, backend); handled App Review and Play policy feedback.
- Built and run gymrpg.app, the app's marketing site (Astro on Vercel): 9 localized versions, 50+ blog articles, 1RM and macro calculators, sitemap and RSS, and a download page with UTM tracking into the app stores.
- Instrumented onboarding and paywall funnels with PostHog to guide product decisions.

Education

MSc Computer Science and Engineering (MEIC-A) 2024 – 2026
Instituto Superior Técnico, Universidade de Lisboa | Final grade: 15/20 *Lisbon*

- Thesis (16/20): *Enhancing Visual Novel Storytelling through Personality-Based Dialogue Systems Powered by Large Language Models*. Supervisor: Prof. Carlos Martinho.
- Built a Flutter desktop editor and game engine where players pick one of 16 emotions on a wheel and a large language model (LLM) writes the line in character from the NPC's Big Five personality, relationships and story context; designers review every line.
- Evaluated with 8 participants: editor usability 77.5 on the System Usability Scale (pass mark 68) and player experience +1.49 on the User Experience Questionnaire, positive on all six scales.

BSc Computer Science and Engineering (LEIC-A) 2019 – 2024
Instituto Superior Técnico, Universidade de Lisboa *Lisbon*

Skills

Languages: Dart, TypeScript, SQL (PostgreSQL); working knowledge of Python, C/C++, Java, C#
Mobile: Flutter, Riverpod, iOS and Android release processes, push notifications (Firebase Cloud Messaging), in-app purchases (RevenueCat), localization
Backend: Supabase (PostgreSQL, row-level security, Auth, Edge Functions), Deno, REST and RPC APIs, webhooks, database migrations
Web: Astro, Vercel, TypeScript, search engine optimization (SEO), localization
Tools: Git, GitHub Actions, Fastlane, CI/CD, Firebase, PostHog
Other: LLM integration and prompt design, user studies (SUS, UEQ), Unity, Godot, Ren'Py

Languages

Portuguese (native), English (fluent).
